

Special Server Setup Procedure

We used an additional react library “rc-calendar” to implement the calendar for the user profile. It is saved to the package.json so a simple npm install should be fine.

Individual Contributions

Ilan Shenar -

- Fixed Authentication
- Set up database connections
- Set up the getUserData and getSportData server responses and database queries
- Set up the postUserReview POST response and database update
- Altered Schema's to work with the new ObjectID's

Kimberly Smith:

- worked on the team array and sports array methods for the sports list page
- Fixed issues with the database, changed id's to ObjectID's

Lingering Bugs / Issues / Dropped Features

- Challenge component is not fully functional, POST response not working
- A dropped feature is location services, the application does not find teams to challenge based on location
