

Team 'Durian'

Ilan Shenar, Nick Hower, Max Galat, Kim Smith, Andy Caccavaro, Adrian Poveda-Mckay

Dynamic UI Write Up

Bugs:

- Challenge Window currently does not receive data correctly, currently replaced with a temporary stand in in order to simulate sending and receiving challenges. Further work is being put in to actually implement challenges correctly.
- profile picture loads correctly when first opened, but when the profile is accessed from the drop down in the navbar, picture no longer loads. Still trying to figure out this one.
- Links on list of players in a team don't currently work.
- Button on sports list to go to the search team not working because search team component not working
- The search button on the navbar isn't fully functional yet

Components:

Profile Component renders a profile page by using TeamSummary, UserSummary, Schedule, TeamReview and ReviewWriter components.

Navbar component renders the navbar and links to different pages.

SportsList component renders the Sports List by mapping through all the sports and rendering a sports box component for each sport.

LeftSidebar component is rendered by several different components and it shows the current user on the left (not fully functional)

TeamPage shows the page for a single team. It displays the team's sportsmanship rating, location, record, description, and reviews that have been written about the team. The page also allows the user to create reviews.

The forumPost and postToForum components allow for team members to talk privately between themselves on their team's page. The actual team check is temporarily commented out for demo purposes, since the user we're logged in as isn't a member of the team on our database.

tempChallenger and tempChallengeSubmit are the stand in component for the challenge window popup, it handles the submission of challenges to teams.

Contribution:

-Ilan Shenar worked on the profile page, navbar and sports list and part of the search team page

-Nick Hower created on the challenge component, both the real one that doesn't work and the temporary one, and helped a little on most components.

-Max Galat did the majority of work on the team page and related components, as well as the base review system used in both team and user pages.

-Kim Smith worked on the profile page and search team page

-Andy Caccavaro Created the majority of the mock data and fixed ER diagram.

-Adrian Poveda-Mckay Created the inter-team forum component
